132 Box-type Spectrometer

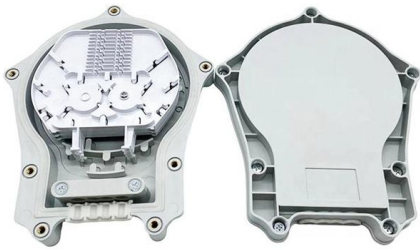

Overview

UV-Visible Spectrophotometer EZL-US132 is a tabletop double beam spectrophotometer that effectively performs routine laboratory work and also for various demanding applications. It provides high-speed wavelength scanning in the UV and visible spectrums, as well as pre-programmed procedures. Suitable for applications such as environmental measurement, color measurement, quality control in production lines, and. This system can be configured with our Sylent[®] stalk % can be further reduced with more dead space between channel light level (outside the band) divided by the BP peak (unsatu h (FWHM) of all spectral lines on all channels (. This guide will help you select the right type of spectrometer based on your specific requirements to things like wavelength, resolution, size, cost etc.
