24b1 is a fiber optic cable with multiple cores

Overview

With 24 single-mode fiber cores housed in a flexible and durable design, this cable ensures efficient data transmission and easy installation within building infrastructures. Made from either high-quality glass or plastic, the core plays a critical role in determining the cable's performance. The number of optical cores in an optical fiber is the total number of equipment interfaces multiplied by 2, plus 10% to 20% of the spare quantity, and if the communication mode of the equipment has serial communication and equipment multiplexing, you can reduce the number of cores.
