4G Router Without Fiber Optic Cable Installation

Overview

A 4G LTE CPE (Customer Premises Equipment) router connects local networks to the cellular network using a SIM card. It transforms 4G LTE signals into wired and wireless internet access for multiple users, eliminating the need for fiber or DSL connections. Fiber optic uses fiberglass cables to carry data through your home and releases the network via an Optical Network Terminal (ONT), which transforms light signals into data. October 31, 2025 by TinyGrab Team Leave a Comment Ditching the coaxial cable doesn't mean abandoning high-speed internet. Looking for a good way to get online, without using broadband?

In this guide, we've walked through five of the best alternatives to fixed-line broadband in the UK right now, which you can use to get internet access without a traditional broadband connection. The solution lies in leveraging cellular technologies like 4G/LTE, which offer high speeds of up to 150 Mbps download and 50 Mbps upload for LTE Cat 4 (e.
