

Blue fiber optic port on router

Overview

The blue port on an AT&T fiber optic internet installment is the Ethernet port through which individual devices can be connected to the fiber optic network. They play a vital role in fiber optic networks, ensuring that light signals are transmitted with minimal loss and reflection. After you have determined the main features, you want to find the port at your modem or router where you can plug in your device. The Ethernet cable (red ends) must be plugged into the WAN port (or port 4) on your Hub and the other end into the Openreach.
