Cables concealed through cable trays

Overview

A cable tray is an organized support structure designed to secure and route these insulated electrical cables. It acts as a dedicated pathway for power distribution and data transmission, often supporting cables hidden behind walls or above ceilings. Designed to support large bundles of electrical or data cables, trays offer an open and accessible structure that simplifies both installation and ongoing maintenance. The most frequently used tray cables are: Type TC - Tray Cable - (NEC Article 336) -Power and control tray cable type TC is a factory assembly of two or more insulated conductors, with or without associated bare or covered grounding conductors, under a non-metallic jacket.
