# **Can fiber optic patch cords transmit 10 Gigabit Ethernet**

## Overview

---

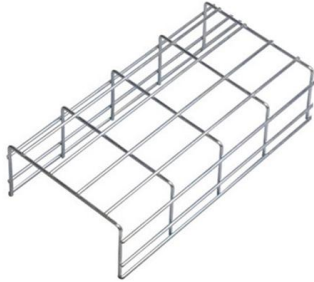

**10G Fiber Optic Patch Cables:** Specifically designed for modern high-speed data centers and enterprise networks, these cables handle the demands of high-speed applications like big data and cloud computing with an impressive data transmission rate of 10 Gbps. The 1310 nm WWDM solution, 10GBASE-LX4, requires the use of a mode-conditioning patch cord on multimode fiber to achieve its specified range of operating distances. The implementation of a cabling design, compatible with LED and laser-based Ethernet network devices, which will allow the integration. Therefore, this article will guide you through a systematic understanding of how to choose the correct patch cord type based on optical modules of different speeds (1G, 10G, 25G). **Single-mode Fiber (SMF):** suitable for long-distance transmission, typical specifications for OS2, can support from 10km. Basically, there are fiber patch panels in each building, not at ideal locations, so I need to run fiber between these patch panels and the endpoint switches in each building. **10-Gigabit Multimode Cables (Aqua OM3) Now In-Stock --** Are you considering a network optical backbone upgrade to 10-Gigabit Ethernet?

Amphenol OM3 50-Micron (50/125) Laser Optimized Multimode fiber optic patch cables combine scalable 10-Gig performance and backwards compatibility with legacy. Generally, we use multimode fiber (MMF) patch cables for multimode equipment while single mode fiber (SMF) patch cables for single mode equipment, like MMF patch cord for 1000BASE-SR transceiver and SMF patch cord for 1000BASE-LR transceiver.
