Checking the fiber optic module on a D-Link switch

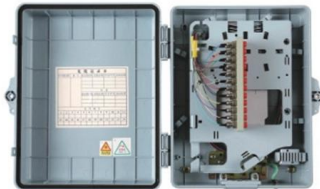

Overview

Check whether SFP or SFP+ transceivers are used, and slots for SFP and SFP+ modules look exactly the same. `get sys interface transceiver <affected_port> diagnose hardware`. The trusted connection from upstream is coming over on fiber (with a copper failover) and the unit is switching between them as expected. They are hot-swappable, Small Form Factor Pluggable (SFP) compliant with the Multi-Source Agreement (MSA) specification. You will be directed to the "Total Resource" page for your product, where you will find the latest, drivers, firmware, manuals, applications and the Tech Support contact number for your product. This article describes steps to perform when SFP/SFP+ fiber link is not coming up.
