Checking the optical port power of Huijue switch

Overview

Run the `display interface transceiver verbose` command to check the transmit and receive optical power of an optical module. This is tested using NetEngine40E Universal Service Router or NE40E running version 8. Optical modules are widely used in switches, network interface cards (NICs), routers, and other communication devices. During use, reading optical module information helps understand its real-time operating status, enabling faster troubleshooting of link abnormalities. Taking the Huawei 5700 series switches as an example, the commands to view optical module information are as follows:

```
Transceiver Type :1000_BASE_SX_SFP Connector Type :LC  
Wavelength(nm) :850 Transfer Distance(m) :300(50um),150(62.
```
