Design concern of VRRP on distribution/core switches

Be sure that you configure STP on core switches so that one of them is the root bridge and the other one is the backup (you need to lower STP priority).

VRRP with VSX configuration

A workaround is to configure VRRP on one SVI (SVI A), and configure active-gateway on the other SVI (SVI B). Active gateway is preferable to VRRP because VRRP traffic is still pushed over the ISL link,
