Connect the power and low voltage wiring ducts together

Overview

According to the NEC, specifically Article 725, Class 1 (power) and Class 2 (low voltage) wiring generally cannot be run in the same conduit, enclosure, or raceway unless certain conditions are met, due to the risk of electrical interference or safety hazards. I want to make it look better by running both the AC wires and DC wires together in one shrink tube sheath thereby making one AC/DC power cord instead of two sperate power cords. Question: Can I do this?

Or, does this article that I found on the subject apply to my situation whereby I should not do. Low voltage conduit is a type of raceway designed to route and protect wires carrying less than 50 volts. Typical examples are ethernet cables, security camera lines, door access wiring, and.
