Copper block in the distribution box

Overview

Tin-plated copper terminal block is commonly used in distribution boxes, not only because of its inherently compact size, but also because it effectively organizes previously messy cables. In actual installations, this accessory is extremely common, almost a standard feature in low-voltage power. SMICO copper terminal blocks & strips - premium electrical connectors for industrial use. They are one-pole modular units with an interlocking dovetail feature that enables ganging of the blocks to create multi-pole configurations according to application requirements. 5 mm² to 185 mm² - Compact potential distribution blocks for the connection of aluminum wire and copper wire Clamping blocks and power distribution blocks (PDB) for the DIN rail are suitable for collecting and distributing potentials within.
