Core Switch Local Area Network Architecture

Overview

It is the top tier of the classic Cisco three-tier hierarchical network model, designed to organize complex IT environments into manageable, scalable, and predictable layers. (For next-generation data center layouts, see our guide on Spine-Leaf Architecture vs. A core switch is a high-capacity, high-performance Layer 3 switch positioned at the physical backbone of an enterprise network. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum throughput to ensure uninterrupted routing and packet. ● Because demands on wireless access points (APs) with the latest standards, including Wi-Fi 6 (802. 5 Gbps and 5 Gbps Ethernet, you should deploy a network that is ready to support the demand without.
