Low-voltage distribution networks

In densely-loaded areas, a standard size of distributor is laid to form a network, with (generally) one cable along each pavement and 4-way link boxes located in manholes at street

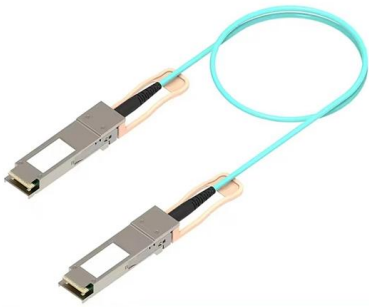

Distribution Substation

The secondary distribution system includes distribution transformers, secondary circuits (secondary mains), consumer services (or service drops), and meters to measure consumer energy consumption.

Primary and secondary power distribution systems (layouts explained)

All interconnectors to our neighboring countries are modelled as ordinary PQ-loads connected to the Danish AC-side busbars. The data comprises a balanced Load Flow case for the year 2020.

Energy infomaps

The maps show Denmark's power producers and interconnectors in 1985 and 2015 respectively. This clearly shows the development from central to decentral power production in Denmark.
