Distance between PoE switches and network switches

Overview

In PoE (Power over Ethernet) technology, the Ethernet link between the Power Sourcing Equipment (PSE) and the Powered Device (PD) has a clearly defined maximum distance limit—328 feet (100 meters). Network deployment planning requires thorough understanding of basic technology constraints when the network requires extensive distance coverage. While I have read that there is a 328 feet or 100 meter max when connecting from one switch to a device (PoE). In the field of network cabling and device power supply, Power over Ethernet (PoE) technology has become widely adopted due to its ability to transmit both data and power over a single Ethernet cable. With a single Ethernet cable delivering both power and data, PoE simplifies installation and improves reliability for devices such as cameras, phones, sensors, access points, and intercoms.
