Distribution box fan coil unit

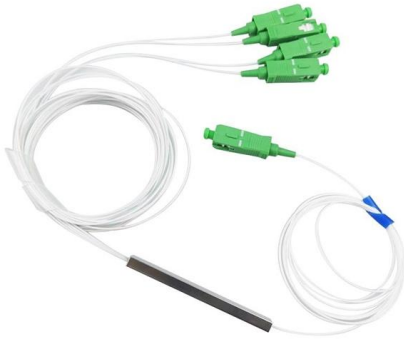

Overview

Box is compatible with both 2-pipe and 4-pipe systems and operates efficiently in condensing systems, dry cooling, district cooling, and geothermal systems. Box Fan Coil Units are designed to meet the performance requirements of public spaces. Flat top, slope top, or concealed units with a 3-speed direct-drive motor in PSC or ECM. Terminal units such as fan coil units, climate panels and induction units are particularly popular in HVAC systems for larger buildings. There are some good reasons for that; they don't take up precious floor space, they can be accessed for service or maintenance, they are simple to connect to the.
