Does a broadband ODF frame require a splitter

Overview

Before reaching the end-users, this signal must be divided using an optical splitter (e. The 12-SC ODF frequently serves as the secondary aggregation point in this architecture. Designed for distributing optical signals from feeder cables to multiple drop cables in FTTH networks. The NGF Modular Splitter Block utilizes CommScope's splitter packaging technology and is used in CommScope's Next Generation Frame (NGF) which has unmatched density for fiber management and signal distribution. Optic Distribution Frame is suitable for large capacity wiring requirement, such as FTTX local or branch point, can be configured with optic splitter modules, easy to achieve optic splitting.
