Does the broadband optical splitter cost money

Overview

Cost is a decisive factor in PON rollouts, where splitters represent 10-15% of capital expenditure (CAPEX) but influence 30-40% of operational costs through maintenance and power budgets. FBT splitters, based on fused fiber tapering, offer simplicity and affordability, while PLC splitters, fabricated using waveguide lithography on silica substrates, prioritize precision and uniformity. This professional analysis compares FBT and PLC splitters across performance metrics—such as. Where splitters are placed in the network can make significant impacts on fiber counts, network cost and deployment time and operational steps, such as customer onboarding and maintenance. One important note is that splitting architectures should be seen as tools that can be mixed and matched to.
