## Overview

---

The '2025 Europe PV system pricing' report covers solar capex for 15 major countries across residential, commercial and utility-scale segments. It includes detailed breakdowns for national average system costs for France, Germany, Italy, Spain and the UK across the three. Every month we publish a current price index on the development of wholesale prices of solar modules. Compared with the 2024 index, pvXchange Trading raised the efficiency threshold from 22. While we raised our solar targets dramatically through our strategy to 320 GWAC (400 GWDC) by 2025, the forecast in this report show that this goals are spot on with market expectations. The report shows major growth in the solar rooftop segment, indicating that Europe's citizens and businesses. According to the latest report from SolarPower Europe, the growth in new PV installations slowed in the second quarter (Q2) of 2025, with the total new installation forecast for the year. Installed solar costs across Europe span from €800 per kWp in Romania to more than €2,300 per kWp in Luxembourg — a.
