External cable routing

Overview

Internal routing offers a sleek, modern appearance by hiding cables inside the frame, while external routing exposes cables for a traditional look. External routing allows easier access for maintenance, repairs, and troubleshooting compared to internal cable setups. In such cases, an external cable routing system provides a viable solution, allowing riders to enjoy the benefits of a dropper seat post without needing to modify or replace their frame. Smooth shifting, responsive braking, and clean handlebar setup all depend on properly routed cables.
