Fiber optic network aggregation switch

Overview

A fiber optic aggregation switch is a high-capacity network device designed to integrate and manage multiple fiber optic connections from access layer switches into fewer and faster uplink connections to the core network. The cnMatrix series of fully managed switches delivers full Layer 2 and Layer 3 capabilities with enhanced access security. Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink. With advanced features such as Static Routing, DHCP Server, ACL, IGMP Snooping, STP, LAG, and centralized cloud management, they offer a robust and reliable solution for the aggregation layer of SMB networks.
