Function of a 24-port terminal box

Overview

The terminal access box provides 8, 16 or 24 ports in a simple, single-layer design – quick and easy access to all splicing and interconnects under one cover. The box allows for straight-through cabling to multiple floors, while distributing fibers onto each floor. AZE's Outdoor Fiber Optic Distribution Box is applicable in FTTH project and suitable for building's outer walls application; They can distribute cables after installing splitters and also can draw out room fiber optic cables by direct or cross-connections. Enhance your network capacity with our 24-Port Fiber Optic Terminal Box, designed for high-density direct termination and patching. These boxes serve as the interface points between the outdoor fiber optic cables and the indoor network equipment.
