Functions of German Intelligent Power Distribution Cabinets

Overview

An Intelligent Power Distribution Unit (iPDU), also known as a Smart PDU or Intelligent PDU, is a critical component in modern data center infrastructure. iPDUs serve as a centralized power management solution that enhances the efficiency, reliability, and monitoring capabilities. Our reference project shows how we developed three different versions of the REDline Power Box Hybrid with customer-specific. The units offer Fault Passage Indication (FPI) functionality and enables accurate current and voltage measurements from the medium-voltage network utilizing ABB's lightweight sensor technology. PDUs from the Intelligent series also create transparency and help optimise energy management.
