Household electrical distribution box high temperature alarm

Overview

Temperature monitoring: Install temperature sensors or thermal appliances to monitor the temperature of the distribution box. When the temperature exceeds the set threshold, an alarm will be triggered or the power will be cut off automatically. Methods to prevent overheating of the distribution box include: Proper Ventilation: Make sure there is adequate space and ventilation around the distribution box to facilitate air circulation and heat dissipation. NTC single-ended glass-sealed resistor/PT100/1000 platinum resistor (customizable) Multi-point. □High-quality galvanized steel□Electrical junction box is made of galvanized steel with better anticorrosive properties, one-time molding electrostatic double-layer spraying, crystal-plating process is sturdy and durable, not easy to be deformed, and adapt to a variety of environments. It is suitable for 3-35kV indoor switchgears, including built-in switchgears, handcart switchgears, fixed switchgears and loop-net.
