How much does a telecom optical module cost

Overview

The average 10G SFP price typically falls between \$10 and \$300, depending on the module type, transmission distance, and brand. For most standard enterprise and data center deployments, the practical buying range is much narrower—and far more predictable—than many price lists. His director had asked for a budget estimate for a data center-wide 400G system upgrade. Calculating the costs across 1,200 switch ports using standard Cisco list pricing, David watched the total QSFP-DD spend multiply. Understanding Optical transceiver Pricing helps procurement, network planning, and total cost-of-ownership decisions. This post offers quick access to the SFP module price list by researching top vendors. The prices of optical modules are greatly influenced by several major factors, which are as follows.
