# **How to move the fiber optic communication cable in the field**

## Overview

---

Here's how to safely move fiber optic cable: When moving fiber optic cable, follow these steps to ensure success: Planning: Assess the route carefully, noting any obstacles or sharp turns. Underground cables are pulled in conduit that is buried underground, usually 1-1. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. This process demands careful planning to maintain service continuity and optimal performance.
