How to power off the core switch

Overview

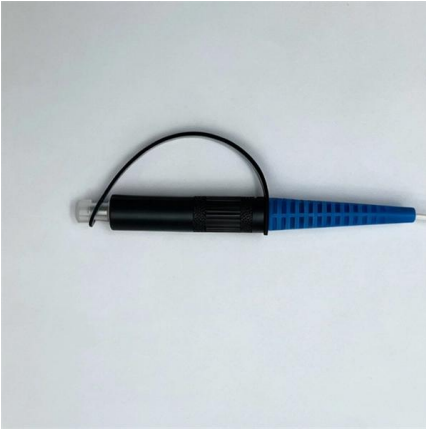

Theoretically, Cisco recommends you save the command and issue the "reboot" command. Once the terminal or console loses connection then you power off the chassis. Is it just turn off the power switch at the back of router/switch or need to issue some command in user EXEC mode /privileged mode to shut down the router/switch?

explain please, thank you 07-04-2008 04:33 AM You needn't any commands for doing this. Summary: Basic procedures for powering down an MDS series switch for migration or similar purposes. Cisco switches are the backbone of countless modern networks, responsible for efficient data forwarding and management. Periodically rebooting these critical devices is essential for maintaining optimal performance, applying configuration changes, and resolving certain software-related issues. But I can't find a way to turn off the switches! They do not have an on-off switch or button like the routers or PCs. Does anyone know how to power off the switches I'm not currently using?

I'm not even running this on a potato computer, it's a decent laptop, i7 8550u, 16 GB RAM.

How to power off the core switch

Rewiring and replacing core switch : r/homelab

It's one of those things that's a little harder to justify on the power consumption front, and it's not something that can be quickly switched off / switched on with little consequence to the rest of
