If there s a patch cord for fiber optic cables there s no need for pigtails

Overview

Buyer question: Can patch cords replace pigtails inside the ODF to "save a step"?

Answer: No. Patch cords aren't for permanent splicing; they're for reconfigurable front-side patching. By the end, you'll be equipped to choose the right component for your network's needs, ensuring optimal signal transmission and longevity. A fiber optic patch cable, also known as a jumper or a patch cord, is a short length of fiber optic cable that has connectors on both ends. The connectors allow the patch cable to connect two devices or ports, such as switches, routers, servers, or patch panels.
