# **Installation sequence of switches in a three-level distribution box**

## Overview

---

In the three-phase distribution box, 3 pole MCBs are used for the output loads. Phase 3's Powersafe Sequential Mating Box controls the connection sequence of incoming / outgoing high current cable connections. The complete set of products can form a complete three-level protection system for construction electricity, achieving the goal of one machine, one switch, and one protection, which is very suitable for various standard engineering applications.
