The design and structural optimization of the 1 x 2 POF splitter are simulated by the beam propagation method (BPM). We fabricated the device through a low-cost manual assembly process,

### Covering the Basics of Beamsplitters -- Firebird Optics

Beam splitters are integral to most optical systems and are also used in interferometers, fiber optics and imaging systems. There are several different

## Lecture13\_228B\_W06\_Final.ppt

Example: For  $kl = (2m+1)p/4$ , and  $m$  is a nonnegative integer, power at the input will be split evenly between the two output ports. This is also known as a 3-dB coupler. Note that for a signal incident at

## Introduction to Passive Optical Network Splitter Architectures

The splitters are stand-alone, not co-located with other splitters. In this scenario, the splitter is most often located in a closure or pedestal in the outside plant.
