Is it necessary to use patch cords when laying fiber optic cables

Overview

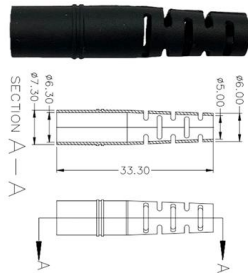

Correct patch-cord installation is essential for maintaining low insertion loss, stable return loss, and long-term reliability in both indoor and outdoor fiber networks. When you build or upgrade a fiber network, the same four words pop up everywhere— fiber optic (bare fiber), pigtail, patch cord, optical cable. The principles of good management for fiber optic cords are similar to those for twisted pair cabling; however, there are special considerations with optical. These patch cables are typically used for connections in data centers or between racks to connect fiber optic. Standardized fiber optic patch cords can make the optical cable look neat, facilitate future project maintenance, and make it easier to find your fiber or locate faults.
