Is it okay to put the router in a network cabinet

Overview

It is not recommended to place your router inside a cabinet as it can lead to poor Wi-Fi signal strength and potential overheating issues. The only answer is to try both locations (and other locations if possible) to determine the resulting wireless performance. When setting up your home network, one of the first decisions you will have to make is where to put your modem or router. Careful planning ensures your router stays cool and your internet connection remains.
