Is splicing of fiber optic cables permissible

Overview

Splicing is only needed if the cable runs are too long for one straight pull or you need to mix a number of different types of cables (like bringing a 48 fiber cable in and splicing it to six 8 fiber cables.)Fiber Optic Cable Splicing is the method of joining two fiber optic cables together. In this guide, we cover the basics of fiber optic splicing, how to perform splicing using two different methods, and finally some best practices to. Fiber optic joints or terminations are made two ways: 1) splices which create a permanent joint between the two fibers or 2) connectors that mate two fibers to create a temporary joint and/or connect the fiber to a piece of network gear.
