## Overview

---

QSFP-DD is a new module and cage/connector system similar to current QSFP, but with an additional row of contacts providing for an eight lane electrical interface. It is being developed by the QSFP-DD MSA as a key part of the industry's effort to enable high-speed solutions. QSFP-DD Packaged Optical Module by Application (Data Center, Cloud Computing, Large Scale Network, Others), by Types (200G, 400G, 800G, Others), by North America (United States, Canada, Mexico), by South America (Brazil, Argentina, Rest of South America), by Europe (United Kingdom, Germany, France. The QSFP-DD transceiver has become the standard format for 400G and 800G connections because it delivers backward compatibility and high port density and future-proofing protection which most installations need. The guide provides complete information required for successful QSFP-DD transceiver. As cloud computing, artificial intelligence, and large-scale data centers continue to grow rapidly, the demand for higher bandwidth and greater network efficiency is increasing.
