Overview

Engineering thermoplastics like polycarbonate and epoxy-coated steel are very safe and strong. Steel enclosures provide excellent protection against physical impact and are also resistant to corrosion, making them suitable for harsh. Smart Distribution Boxes: Equipped with advanced features such as remote monitoring, energy management, and automation integration, these are the future of electrical distribution systems. The major requirements are as follows: 1) Flame retardant with Glow Wire Flammability Index at 960°C as per IEC 60695 to ensure that any flame outside the box cannot enter inside and damage equipment and also to prevent any flame within the box from spreading outside. Distribution boxes, also called distribution boards, are essential components in both residential and commercial electrical systems.
