# Multimode Pigment Inspection Report

## Overview

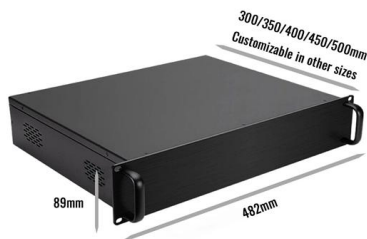

---

The inspection and identification of pigments is a critical task in forensic identification. Previously, investigators mainly analyzed them manually by comparing infrared spectra one by one, which wa.

### Comparison and characterization of pigments and dyes by Raman

This review provides a general understanding of Raman spectroscopy for use in the identification of pigments and dyes. The methodologies associated with a number of different related applications are

### Raman Application Note

Questions of product identification, date analysis or detection of falsifications can now be solved using Raman spectroscopy. This analytical method is a powerful instrument for all these questions. Cut

### Pigment testing and inspection , Industrial Physics

We build reliable pigment inspection and testing instruments that rapidly analyze any property of any pigment you are examining. This will give you a clear picture of which paints and coatings work best

### Multispectral imaging of pigments with a digital camera and 12

It must be used only for mapping the pigments, and to attempt a strictly preliminary

identification which should be confirmed by other elemental or vibrational spectroscopies.

### Testing of Pigments for Plastics

This test procedure is designed to determine how quickly pigment agglomerates (undispersed particle) will collect on the surface of plastic blown film as per standard test method (DIN 13900-6).

### Observation and Measurement of Pigments Using Digital Microscopes

This section explains how pigments differ from dyes and types of pigments along with examples of how they are observed using a digital microscope.
