Network Fiber Optic Terminal Box

Overview

The FTTH Terminal Box serves as a compact fiber termination enclosure for residential and enterprise optical networks. It safeguards splicing points and connectors, ensuring clean and accurate signal transmission in Fiber-to-the-Home (FTTH) projects. Robust and easy to deploy, our termination solutions for indoor and outdoor applications are ideal for single dwelling unit (SDU) and multi-dwelling unit (MDU) configurations. Their primary function is to protect and manage the spliced fiber optic cables, ensuring they remain secure, well-organised, and unaffected by environmental factors. Fiber Optic Distribution Box (FDB) / Fiber access terminal box (FAT) / optical termination box (OTB) / Fiber termination box (FTB) / Optical Distribution box (ODB) are a compact fiber management box used for FTTH application. The MEXFOSERV® Fiber Optic Terminal Boxes, also known as Network Interface Device (NID) which are typically used as a transition point where the OSP cable is spliced to an indoor cable.
