Network operations and maintenance of network security equipment

Overview

Routinely inspect servers, storage & network equipment for issues. In today's digital age, network security management is a mission-critical responsibility for network administrators working within IT systems operations and maintenance. Some of the more common network maintenance tasks include, but are not limited to, the following general activities: Installing, replacing or upgrading both. This guidance provides an introduction to the key topics to consider when designing, maintaining, or using networks that need to be secure and resilient. This includes its responsibilities to identify and disseminate threats to National Security Systems, Department of Defense information systems, and the Defense Industrial Base, and to develop and issue cybersecurity.
