No internet access after replacing the fiber optic router

Overview

When facing "new router no internet" issues, a simple reboot can often work wonders. Every device in my house is connected either via ethernet or wirelessly through the mesh network. To access the router's settings, open a web browser, and type the IP Address, usually printed on a label on the back of the router. Log in using the router's default username and password, or other general combinations such as username admin; password admin, or username admin; password 1234/0000. My internet service provider is having an infrastructure overhaul, switching every home to fiber optic from coaxial.

No internet access after replacing the fiber optic router

Do I Need to Rewire My House for Fiber Optic?

If your home primarily relies on wireless internet access, which is common, the technician will connect the ONT to a router. The router will then broadcast the
