No internet connection even with fiber optic cable plugged in

Overview

Running the "Network and Internet" troubleshooter and updating the drivers can help fix most Ethernet-related issues, including this one. Your fiber optical network terminal (ONT), modem, or gateway provides LEDs letting you know the status of your internet (wide area network, or WAN) and home network (local area). This is actually easier to fix than WiFi problems because there are fewer variables — no signal issues, no channel congestion. However, encountering issues such as your Ethernet connection showing "No Internet Access" while still connected can be frustrating.
