## Overview

---

OM4 fiber is a laser-optimized 50  $\mu\text{m}$  multimode optical fiber that offers significantly improved bandwidth and performance compared to OM3, enabling higher data rates over longer distances in data centers and enterprise networks. To recap Optical Fiber can be divided into Multimode Fiber (MMF) and Single-Mode optical fiber (SMF). Multimode Fiber (MMF) has a core diameter, typically 50–100 micrometers, has ability to transfer multiple modes of light through the fiber core, uses lower-cost electronics (LED, VCSEL) operates at. The ISO/IEC 11801 standard defines five classes of multimode fiber: OM1, OM2, OM3, OM4 and OM5. Leviton reserves the right to modify details without notice in light of subsequent standard/specifications.
