Optical Module Wide Temperature Range

Overview

Chip Tolerance to Temperature: Commercial grade optical modules operate in the temperature range of 0°C to 70°C. Optical modules can be categorized into commercial temperature, extended temperature and industrial temperature grades based on their operating temperature ranges, as shown below: Table 1: Operating Temperature Ranges of Optical Modules Users can select modules with different temperature grades. An industrial transceiver is a device for industrial communication, transmitting and receiving digital or analog signals. 5 W, adding notable thermal load—be careful with high port density in sealed cabinets. QSFP+ modules, designed for 40 Gbps transmission, are less common in industrial settings.
