# **Optical Power Meter Integrating Red Light and Optical Power Meters**

## Overview

---

The Red Light Optical Power Meter (OLP) is a cutting-edge testing instrument that combines the functionalities of an Optical Time Domain Reflectometer (OTDR) and an Optical Power Meter (OPM). Keysight optical power meters measure optical signal strength, providing multi-channel measurement processing and system control while offering rapid response times, wide dynamic range, and simple integration into automated test setups. Optical power meters and detectors have been served by Newport for over 30 years. The offering ranges from a low cost, hand-held meter to the most advanced dual channel benchtop power meter available in the market. Our 1936-R/2936-R series boasts state-of-the-art analog boards with a whopping 250. The term usually refers to a device used for measuring the average power in fiber optic systems.
