## Overview

---

Other general purpose light power measuring devices are usually called,, power meters (can be sensors or ), or lux meters. The JDSU (Acterna) OLP15C is a compact, high performance optical power meters for installation, maintenance and repair in fiber optic networks. OLP-18C: from -35 dBm (850, 980 nm), from -40 dBm (1310,1550,1625 nm) Acterna is present in more than 80 countries. An optical power meter (or laser powermeter) is an instrument for the measurement of the optical power (the delivered energy per unit time) in a light beam, for example a laser beam.

An optical power meter (OPM) is a device used to measure the power in an optical signal. The term usually refers to a device for testing average power in fiber optic systems. Other general purpose light power measuring devices are usually called radiometers, photometers, laser power meters (can be photodiode sensors or thermopile laser sensors), light meters or lux meters. A typical optical power meter consists of a calibrated sensor, measuring amplifier and display. The sens
