Photosensitive element of optical power meter

Overview

Detectors: At the heart of GAO Tek's optical power meters are high-sensitivity photodetectors. These detectors, typically made of semiconductor materials such as InGaAs or germanium, convert light signals into electrical signals with high accuracy. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. Most photodiode manufacturers specifically design their diodes to be used in either the photoconductive (reverse biased) or the photovoltaic (no bias) mode.
