Primary distribution box does not trip

Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. Frequent tripping of your distribution box is a critical alarm, not just an annoyance. For facility managers, electricians, and project owners operating overseas—from industrial plants in the Middle East to solar farms in Southeast Asia—these unexpected shutdowns mean costly downtime, safety risks. Very often, the lowest-level circuit breaker does not trip, but the upstream (higher-level) one does! This causes a large-scale power outage! Why does this happen?

Today, we'll discuss this issue. Main Causes of Cascading (Unintended Upstream) Tripping The main circuit breaker's load capacity is. A loose or disconnected wire can prevent the power from getting to that socket or appliance.
