# **Requirements for Outdoor Optical Cable Operations**

## Overview

---

163 describes criteria for the installation of optical fibre cables defined in Recommendation ITU-T L. Optical fiber cables are designed to provide optimum performance over their service life when deployed in applications for which they are intended. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. There are three common laying methods for outdoor optical cables, namely: underground pipeline laying (that is, laying optical cables in underground pipelines), direct underground laying and overhead laying (that is, laying from utility poles to utility poles in the air. This is a description of the processes used in outside plant (OSP) or outdoor fiber optic cable construction, basically what happens before and during the process of installing the fiber optic cable plant. The FOA has extensive material available in our textbooks and online FOA Guide on what is.
