Requirements for electrostatic grounding terminals in distribution boxes

Overview

The general rule requires connecting the grounding terminal of a grounding-type receptacle and a metal box joined to an equipment grounding conductor employing an equipment bonding jumper sized per Table 250. This Grounding Standard describes the technical requirements for grounding the SEC Distribution Network installations. 8 kV) feeder outlets of HV / MV Substations down to SEC Customer interface including KWH-Meters and meter boxes. The topic of system grounding is extremely important, as it affects the susceptibility of the system to voltage transients, determines the types of loads the system can. During fault conditions, low impedance results in high fault current flow, causing overcurrent protective.
