Ring network switch fiber optic interface

Overview

A fiber optic ring network is a physical or logical network topology where devices (usually switches) are connected in a closed-loop using fiber optic cables. The fiber optic ring redundancy design for industrial Ethernet switches is precisely engineered to address this pain point—achieving millisecond-level fault self-healing through the synergy of physical ring architecture and intelligent protocols, thereby constructing the "self-healing heart" of. The MSW-1208-FO equips with 6 Fast Ethernet ports and 2 fiber ports, and it features rich layer 2 managed functions such as. Offering flexibility, it is available with either 8 or 10 ports, featuring up to 2 fiber optic FX-ports and 6 or 8 RJ45 TX-ports.
