SFP and SFP are single-mode or multimode fiber optic cables

Overview

Single-mode SFP and multimode SFP are the two main types of hot-pluggable optical transceivers used in fiber optic networks. If you're dealing with Small Form-factor Pluggable (SFP) modules, you may find yourself needing to identify whether it's single-mode or multimode. The distinction is important as it affects network performance, distance, and overall cost. The type of cable you use determines how the light travels, the distance you can run the signal, the cost, and the environment it is used in.
