Sri Lanka Local Power Distribution Box Retrofit

Overview

This project aims to stabilize the power supply to Colombo and the southern end of the Western province by repairing the Kolonnawa Substation and by increasing the voltage of the transmission line that runs between Biyagama and Pannipitiya from 132kV to 220kV. When calculated on a monthly basis, the specified period shall be considered as the period from the first day of a calendar month, until the end of the month, determined by recording its voltages over a 24 hour period. This study examines how Sri Lanka achieved countrywide electrification by 2016 and looks at its socioeconomic impact. The project was incorporated in year, 2013 with the intention of filling the vacuum of a capable, reliable, trust worthy, user friendly and affordable electrical energy engineering service provider in the energy sector in Sri Lanka. The study is simply developed based on the one important component named as agent and the system comprises of more than one agent is named as the multi agent system.
